

**Cleanliness problems solved
with no electricity required,
just an existing shop air line!**

- ◆ One-touch operation allows an operator to pull the trigger on an air nozzle and simultaneously actuate both an air jet and suction.
- ◆ Portable, with a small footprint, the unit can quickly and easily be installed next to a CNC machine while making valuable shop floor space available for other operations. 36 in. tall, 14 in. diameter
- ◆ The standalone unit, powered by air, is being used near CNC machines or inspection stations to clean oily residue and chips from parts, then captures that residue with vacuum into a container for recycling. 500 CFM suction.
- ◆ Clean, filtered air exits MiJET, keeping fine aerosol droplets and particulate contained.

*Need a green solution
for cleaning parts and
keeping the shop clean
at the same time?*

MiJET™ Patent Pending

Product of Custom Service Solutions, Inc.

MiJET™ is an affordable, compact solution that takes care of several problems associated with spraying air alone on parts when cleaning lubricant and chips off near your machines.

- ◆ *Expensive coolants are sprayed on the floor — MiJET™ captures it.*
- ◆ *Aerosol mist created is unhealthy to inhale — MiJET™ captures it.*
- ◆ *Slippery floors causing slips, trips, and falls — MiJET™ captures it.*
- ◆ *Reduce cleaning time and cost of supplies — MiJET™ captures it.*
- ◆ *Parts inspection can take place immediately.*

“Since we installed MiJET™ units near several machines, many employees have thanked me for purchasing them. Our facility is cleaner, safer, there is less oil on our floors and mist in the air.”

-Michael Kraemer, GM,Leipold

The MiJET™ system was designed and developed by Custom Service Solutions, a company with years of experience solving problems in the manufacturing industry.

Optional accessories sold separately include:

Low noise air nozzle

Parts baskets, 1/8" and 914m mesh

MiJET Dolly with 5 wheels, (2 locking wheels)
